SUMMARY

Software engineer and technical educator with an M.S. in Computer Science, full-stack development experience across the SDLC, and a track record of designing and delivering instructor-led training. I build and ship production software and turn complex technical systems into clear, hands-on learning for technical and non-technical audiences.

EDUCATION

M.S., Computer Science | Pace University, Seidenberg School, New York, NY | GPA: 3.92 / 4.0 May 2025
B.E., Computer Science & Engineering | Rajiv Gandhi College of Engineering, India | GPA: 9.5 / 10 May 2022

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, JavaScript/TypeScript, SQL, React.js, Next.js, Node.js, Express.js, FastAPI
- **Tools & Platforms:** Git/GitHub, Docker, Jenkins (CI/CD), Supabase/PostgreSQL, Firebase, REST APIs, LaTeX
- **Software Development Lifecycle:** SDLC, Agile/Scrum, Sprint Planning, Requirements Gathering, Code Review, Debugging & Troubleshooting, Release Coordination, Object-Oriented Design, Authentication & Access Control, Technical Documentation
- **Technical Training & Enablement:** Needs Analysis, Skill-Gap Identification, Instructional Design, Curriculum Development, Instructor-Led Training, Hands-On Workshop Facilitation, Self-Serve Learning Resources, Learning Impact Measurement, Content Maintenance
- **Collaboration:** Cross-Functional Collaboration, Stakeholder Communication, External Partner Coordination, Presentation, Change Management, Concurrent Project Management

PROFESSIONAL EXPERIENCE

High School STEM Teacher Jul 2026 – Aug 2026
Zeta Charter Schools, New York, NY

- Designed and delivered physics instruction for a founding high school program, translating abstract technical concepts into scaffolded, sequenced lessons for learners with no prior background in the subject.
- Built classroom systems and routines from the ground up, defining entry procedures, workspace standards, and explicit success criteria.

Mathematics Teacher (7th Grade Algebra) Jul 2025 – Jul 2026
Success Academy Charter Schools, New York, NY

- Planned and delivered daily instructor-led Algebra sessions for 47 students, adjusting pacing and delivery in real time based on comprehension checks.
- Ran ongoing needs analysis with exit-ticket, quiz, and interim assessment data to pinpoint skill gaps and choose the right intervention (reteaching, additional practice, or new instruction), contributing to a 93% NYS Algebra Regents passing rate.
- Measured instructional impact at multiple levels, from session engagement and immediate assessment results to retained application in later units and cohort outcomes, and revised materials and delivery based on what the data showed.
- Built AI-powered internal tools that auto-generated assessments and differentiated practice, cutting prep time and increasing the volume of usable student performance data.
- Recipient of the Success Academy Excellence Award, one of 248 recipients across a network of about 2,900 employees.

Contract Software Developer Apr 2022 – Jul 2023
HSPM Solutions LLP, Pune, India

- Built full-stack web application features with React, Node.js, Express.js, and REST APIs across Agile delivery cycles, owning each feature end-to-end from requirements through release.
- Took part in structured code review and owned version control and release coordination in GitHub, enforcing team conventions and catching defects before they reached production.

Training & Placement Head / Student Council President May 2020 – May 2022
Rajiv Gandhi College of Engineering, Nagpur, India

- Planned and ran 20+ industry workshops and technical training programs with leading tech companies, scoping content jointly with external partners and seeing each one through to delivery.
- Partnered with recruiting companies to understand the skills they needed, then translated those requirements into structured, transferable learning plans that prepared students for roles across multiple employers.
- Reviewed each learning plan with academic faculty for validation and curriculum alignment, then delivered the resulting seminars alongside the student team, keeping companies, faculty, and students aligned from planning through delivery.
- Managed 15+ concurrent technical training engagements, coordinating between faculty and industry representatives, while student placement rates rose 60% over the period.

TECHNICAL PROJECTS

Prompt2Print | LLM-Powered Document Generation Platform

- Designed and deployed a production AI system that turns a natural-language prompt and an optional reference document into a standards-aligned, print-ready PDF, built on a Next.js frontend, Python FastAPI backend, and LaTeX rendering pipeline, containerized with Docker.
- Engineered the prompt and retrieval layer to ground output in uploaded reference documents, reducing hallucinated and off-standard content, and built an “edit with AI” loop that lets users refine outputs conversationally.
- Owned the full lifecycle solo, from problem framing and prototyping to evaluation in real classroom use, cloud deployment, monitoring, and debugging live issues (container port binding, auth redirect configuration, stale build state).
- Implemented authenticated multi-user access and a persisted output library on Supabase/PostgreSQL with row-level access control.
